

Unit 2 Vocab- Sample Manipulation

Merge- Combines two clips together.

Split- Cuts a clip into 2 or more parts.

Waveform display- Shows the volume of the clip over time.

Effect- A device (digital or analog) that treats or changes audio in some way.

VST- Virtual Studio Technology: 3rd party plugins that can be either effects or instruments.

Pitch Shift- Changes the pitch or frequency of the clip either up or down.

Delay- Adds one or more echos of the original sound to the track.

Low Pass Filter- Only allows low frequencies to pass through below the cut off frequency

High Pass Filter- Only allows high frequencies to pass through above the cut off frequency
